EDUCATION

Bachelor of Technology in Computer Science and Engineering

Dr. A.P.J. Abdul Kalam Technical University

📅 11/2022 - Present 📍 Lucknow, India

SKILLS

Backend Development: Express.js • MySQL • MongoDB • Node.js • REST API • JSON Server

Authentication & Authorization: JWT • Bcrypt

Tools & Platforms: Postman • VS Code • Postman • VS Code

Frontend Development: HTML • CSS • JavaScript • Bootstrap • React.js • Redux • Context API

Other Skills: Redux-Saga • Responsive Web Design • API Integration • Multer

WORK EXPERIENCE

Full Stack Intern

DUCAT School AI

📅 July 2025 – 12 March 2026

- Gaining hands-on experience in **full-stack development using MongoDB, Express.js, React, and Node.js (MERN stack)**.
- Implementing **responsive UI, RESTful APIs, and state management** using React and Context API.
- Implementing **state management, side-effects, and reusable logic** using **React Hooks** (useState, useEffect, useContext).
- Creating **responsive UI and dynamic components**, integrating them with backend APIs to deliver full-stack features.
- Applying **best practices in component-driven architecture, code reusability, and maintainable frontend design**.
- Collaborating with team members to **develop and maintain React-based frontend components** using both **Class Components and Functional Components**.
- Assisting in testing, debugging, and deployment of projects.

PROJECTS

Apni Dukan | Full Stack E-Commerce Web Application

- Developed a full-stack e-commerce web application using MERN Stack (MongoDB, Express.js, React.js, Node.js).
- Implemented JWT authentication, role-based authorization, product management, cart, wishlist, and checkout features.
- Used Redux and Redux-Saga for global state management and API handling.
- Added secure password encryption, OTP-based forgot password, and image upload functionality.
- Designed a responsive and user-friendly interface with Local Storage persistence for cart data.

LifeLink Healthcare Platform | Frontend Project

- *Built a healthcare web application using React and Redux for state management and smooth navigation.*
- *Developed modules for Doctors, Patients, Appointments, Departments, and Contact Management.*
- *Implemented CRUD operations with real-time data updates using JSON Server APIs.*
- *Designed a responsive, modern, and user-friendly healthcare interface for desktop and mobile devices.*
- *Gained hands-on experience in React components, Redux, routing, form validation, and API integration.*

- Developed a full-stack e-commerce web application using MERN Stack (MongoDB, Express.js, React.js, Node.js).

News App

- Developed a dynamic news application using **React.js**
- Implemented **component-based architecture** for clean and reusable code
- Used **state and props** to manage and display news data efficiently
- Applied **conditional rendering** for loading states and error handling
- Designed a responsive and user-friendly interface

Todo List

- Built a functional **Todo List application** using **HTML, CSS, and JavaScript**
- Used **DOM manipulation** to dynamically display and manage tasks
- Implemented **add, delete, and update** task features
- Making a **responsive and mobile-friendly interface**, ensuring seamless user experience across desktop and mobile devices.
